## #Projects

### *remoteUp*

Hosted Link || Code
#Built a responsive web application using React JS that aggregates remote job opportunities to help those seeking out employment during the pandemic
#Created and implemented my own React components and executed various React Bootstrap library components to achieve a modern look and exceptional user experience
#Launched and now hosting remoteUp through Netlify; maintaining code via GitHub to support user feedback for a continuously improving user experience

### Me & Mauve Website

Hosted Link || Code
#Using JavaScript, HTML and CSS, created a singe page website to promote my own independent music project
#Implemented CSS grid to neatly organize web page and render web responsiveness across all platforms for a smooth and adapted user experience
#Built email re-direct form using Formspree API to collect fan email addresses
